

TITLE

## STATIC DISSIPATIVE THERMOPLASTIC POLYMER COMPOSITION

Abstract of the Disclosure

Static dissipative compositions containing thermoplastic polymers and having  
5 surface resistivities of about  $10^4$  to  $10^{13}$  ohms/square can be readily and reproducibly  
made by mixing into the thermoplastic polymers specified amounts of carbon fiber  
and carbon black. The composition is useful for housings and other parts for shield-  
ing electronic equipment and components.
